

What to do if your vehicle or machinery comes into contact with an overhead power line:

- > If any part of your vehicle is in contact with an overhead power line or within 5 metres of a fallen line then stay on it until the Emergency Services or Electricity Company arrive, unless you are in danger.
- > Phone the Electricity Company using the number on this leaflet.
- > If you must get off then you should jump clear making leaping strides so that one foot is off the ground at all times until you are at least 5 metres away.
- > Do not return to the vehicle.
- > Keep others away from the vehicle. Touching it or even getting too close could kill them.
- > Never touch overhead power lines, always assume that lines are live unless the Electricity Company has told you they are dead.

This information should be used in conjunction with Health and Safety Executive (HSE) leaflet, **Shock Horror** – <http://www.hse.gov.uk/pubns/indg389.pdf>.

Safety Information on Caravanning and Camping

Vital energy, delivered safely

There are overhead power lines criss-crossing the country. Often unnoticed, they are essential to provide electricity to cities, towns, villages and rural communities. They carry voltages ranging from 230 volts (domestic voltage) up to 400,000 volts. Even domestic voltage can be fatal and high voltage electricity can jump large gaps.

The energy network is designed to keep you safe, but people die each year due to accidental contact with overhead power lines, whilst others endure life changing injury with the lives of their families also suffering as a result.

The risk of danger can be considerably reduced by following some simple safety tips.

Staying safe

- > Any power lines, electricity substations or electrical engineering equipment may be live and could kill you. Do not touch them, or any object or person that is in contact with them – even if you believe the power is off, it could be turned on again without warning.
- > Electricity can jump gaps so even getting too close to lines can be dangerous. Many objects can also conduct electricity such as trees, string, rope and water.
- > Rubber boots will not protect you and not all power lines are insulated.
- > Do not assume lines on wood poles are telephone lines – most overhead power lines are supported by poles.
- > If an overhead power line has fallen to the ground it may still be live, keep more than 5 metres away – the current can travel along the ground, through objects such as fences or metal objects and through water or other liquids. You do not need to touch the power line to be killed by it.
- > If you need to get clear, jump clear making leaping strides so that one foot is off the ground at all times until you are 5 metres away.

Top tips

1. Do not touch or get close to power lines.
2. Keep 5 metres away from fallen or damaged power lines, AND
3. Contact the emergency services and the Electricity Company immediately.

Staying safe when caravanning and camping

Before setting up camp always check for overhead power lines.

- > Don't pitch your tent or caravan directly under, or close to an overhead power line.
- > Don't erect TV aerials or radio masts under, or close to an overhead power line.
- > When setting up camp never carry long objects vertically (metal poles, fishing rods or yacht masts etc.). Always carry them horizontally and parallel with the ground.
- > Never attach or tie anything to power line wood poles, pylons or electrical equipment.
- > Never light a fire under an overhead line, the heat from the fire could cause the wires to sag dangerously low or break.
- > Always assume that all overhead power lines are live and are extremely dangerous.
- > The best way to stay safe from live overhead lines is to stay well away.
- > If you have any doubt – contact the local Electricity Company or site owner, who, if they are not sure, should contact the Electricity Company themselves.

Look for the signs

- > Electricity poles and pylons are usually fitted with yellow 'Danger of Death' notices.
- > Site specific information and posters may be available from the camping and caravan park reception.
- > Stay well away from areas marked with warning signs.
- > Remember, occasionally signs get knocked over or vandalised – so ALWAYS check for overhead power lines yourself.

Camping and caravan park owners

You have a responsibility to ensure that public using your facilities are warned of any dangers that may exist. Make sure that signs highlighting the dangers are in place and maintained. If you are in any doubt or if you require further advice, contact your local Electricity Company.
